Posted by dwella - 2007/10/25 17:37

Hi Ive created a menu with movieclips and now I need to make them into buttons so I can browse my site. If I remember correctly I need to give the movie clips instance names right? Ive forgotten the code to make the buttons clickable, to make them go to different pages... Anyone wanna help me out?

you're on the right track.

Yes, you have to first give each of the buttons instance names... I like to use a sequence naming scheem, like btn_0, btn_1, btn_2 ect so that I can easily address them through a loop. Then, I would code like this:

```
var links:Array = new Array(
    "link_url_1.html",
    "link_url_2.html"
);
for(x=0; x< links.length; x++)
{
    _root.my_index = x;
    _root.onPress = function(){
        getURL(_root.links, "_top"Ã,Ã«Ã,Ã»);
    }
}
```

I hope that helps.
